

KIRAN BIJU P

MERN Stack Developer

+91 9995761769 | kir4ns6177@gmail.com | [LinkedIn](#) | [GitHub](#)

Profile Summary

Experienced Full Stack Software Engineer with expertise in the MERN stack Solutions. Adept at building scalable, high-performance web applications and services. Proficient in both front-end and back-end development, efficient in translating Wireframes and PSD Designs into functional web apps. Known for writing clean, efficient code and collaborate effectively in cross-functional teams. Knowledgeable in user interface, testing, and debugging processes. Able to effectively self-manage during independent projects, as well as collaborate as part of a productive team.

Technical Skills

- **Languages and Frameworks:** JavaScript, Express.js
- **Front-End Development:** React.js, Redux, Next.js, Tailwind CSS, Framer Motion, WebSocket, HTML, CSS, GSAP
- **Back-End Development:** Node.js, Express.js, REST APIs, GRPC
- **Databases:** MongoDB, PostgreSQL, MySQL, Firebase
- **DevOps:** Docker, Kubernetes, AWS, Azure, Google Cloud (GCP)
- **Tools:** Git, GitHub, VS Code, Figma, Postman, JWT, NGINX, Cursor
- **Other Skills:** UI/UX, Data Structures, Clean Architecture, Microservices Architecture, CI/CD, Kafka, NATS, AWS S3, AWS SES

Experience

Full Stack Engineer - The Travel Agent Next Door

Mar 2026 - Present

- Worked on multiple products on both backend and frontend requirements.
- Worked on migrating old architecture and systems to updated and reliable NodeJS architecture for business needs.
- Taken part in troubleshooting and debugging different user-facing tickets reported and proposed solutions within the deadlines.

Full Stack Developer - Value at Void

Nov 2024 - Mar 2026

- Worked on multiple client projects and own full stack products.
- Led end-to-end development of **production-grade React applications**, translating complex Figma designs into pixel-perfect, responsive UIs using **React, Next.js, Tailwind CSS, and modern component patterns**.
- Designed and implemented **scalable frontend design-to-dev pipeline**, utilizing semantic design tokens from Figma with to React-based applications to maintain consistent **token-dependent** UI standards across marketing and product applications.
- Integrated **REST APIs and backend services**, ensuring clean separation of concerns, error handling, reduced response time within different projects.
- Architected and maintained **CI/CD pipelines** using **GitHub Actions and AWS CodeDeploy**, enabling automated, zero-downtime deployments for Node.js backend services on **EC2**.
- Migrated, deployed and managed applications on **AWS infrastructure**, including **EC2, S3, CloudFront, ACM (SSL), IAM, and Elastic IP**, ensuring secure, scalable, and cost-efficient environments.
- Utilised **serverless functions** to create APIs for no-code platforms to carry on specific backend tasks using **AWS Lambda and Azure Functions**.
- Worked extensively with **Sanity CMS and Next.js**, designing flexible, page-specific content structures for marketing websites without shared layouts, enabling full editorial control.

- Actively explored and prepared for **AI-assisted development workflows**, including MCP servers, design-to-code pipelines, and AI-driven productivity tooling, aligning the codebase for future AI integrations

Projects

Hirehive - Creative Hiring Application

[LiveLink](#)

A recruitment and job management platform specially made for **creative hiring** that enables organizations to create, manage, and track job postings through a centralized dashboard.

- Migrated the entire project from **Render** hosting to **AWS Infrastructure** with zero-downtime.
- Designed and implemented a **config-driven UI system**, enabling **role-based** rendering of single component from JSON/configs for all personas which significantly reducing hardcoded logic and accelerating feature delivery.
- Developed and optimized **Node.js (Express) APIs**, focusing on **low-latency responses**, predictable payloads, and clear contract definitions for frontend integration.
- Improved API response times by **optimizing database queries, reducing redundant computations, and structuring efficient data transformations** before sending responses
- Ensured **production-grade observability** by integrating **CloudWatch logs, metrics, and SNS alerts**, enabling faster detection and resolution of runtime issues.

Haulerhub Portal - Logistics Management Application (Frontend)

A logistics management application build for a client on Reactjs with solid design-to-dev pipeline which is tightly couples figma tokens to control the styles in the application.

- Created a token-based design system using Style Dictionary for consistent theming
- Utilizing **Figma MCP servers** with **Cursor** to speed up the development of UI and done further refinement to make it pixel-perfect.
- Ensuring smooth delivery of updated code to client through properly managed **Github branches** for production, staging and dev.
- Implemented **Storybook** and deployed it on vercel to make review of components easy for designers with side-by-side comparison with Figma

Multiple Client Projects

Worked on different client projects by extending the development needs in design, backend and infrastructure needs.

- Rewamped the UI for different **Next.js** marketing website with **Sanity CMS** Integrations.
- Worked on integrating custom code using React in no-code platform like Framer to do custom tasks like **multi-step forms, Hubspot form submissions** for many marketing websites.
- Created **Email Signatures** which works on most of the email providers for different clients.
- Created **AWS Lambda** and **Azure Functions** for certain backend tasks from no-code platforms.
- Migrated assets from Cloudinary to **Azure Blob Storage** to avoid the unexpected blocking and scaling the usage of the assets with optimized delivery.

RollIN - Movie Booking Application

[GitHub](#) | [LiveLink](#)

A movie booking application with Express, Node.js, MongoDB, and React. Features include state management, AWS S3 for media storage, Framer Motion animations, Google Maps for location, and a responsive UI. Deployed on GCP using Docker and Kubernetes.

- Dynamic seat allocation based on theatre owners preference using **DND Kit** for **Drag N Drop**.
- Real-time notifications for pre-show alert using **Socket.io**.
- Interactive **UI/UX** using **TailwindCSS** and **Framer Motion**.
- Integrated seamless payment experience using **Cashfree Payments**.
- Utilized **Redux Toolkit** for efficient state management.

- Implemented **Clean Architecture** for isolated management of codebase.
- Deployed on **Google Cloud Platform** utilising **Google Kubernetes Engine** and **Google Artifact Registry**.

AdoreHome - E-commerce Application

[GitHub](#) | [LiveLink](#)

Built an e-commerce platform for home appliances using Express, Node.js, MongoDB, with a responsive UI, deployed via AWS EC2 and NGINX.

- Integrated **RazorPay** payment gateway for efficient payment.
- Implemented **JWT** for secure user authentication.
- Integrated **Cloudinary** for media storage.
- Deployed on **AWS EC2** instance using **NGINX** as reverse proxy.

WomensNest - Cyber Complaint Portal

[GitHub](#) | [LiveLink](#)

A collaborative portal for reporting cyber complaints, developed as part of a hackathon with MongoDB, Express, and EJS.

- Collaborative project coordinated using **Github**.
- Integrated **MVC Architecture** for minimal complexity and efficient code management.
- Deployed on **AWS EC2** instance using **NGINX** as reverse proxy.

Mini Projects

DevDiary - Mini Blog Application

[GitHub](#) | [LiveLink](#)

Full-stack mini blog app using Next.js, Express, SSR, ISR, and Cloudinary for image management.

- Utilized **NextJS SSR** for static data generation and better SEO optimization.
- Integrated **Cloudinary** for secure and fast media storage.

PhotoPulse - Stock Image Platform

[GitHub](#) | [LiveLink](#)

A stock image platform utilizing drag-and-drop, SSR, and ISR features with Cloudinary for image storage.

- Utilized **NextJS SSR** for static data generation and better SEO optimization.
- Implemented **Drag N Drop** for sorted Album management.

User Management System

[GitHub](#)

An efficient User management System built using React which offers secure signup and login for users and a superadmin who manages User activity.

- Implemented **React** with **Redux Toolkit** for state management.
- Implemented **PostgreSQL** with **Sequelize** ORM for efficient storing of data.

Clone Websites - Netflix, OLX

[GitHub](#)

Developed clones for Netflix (using TMDB API), OLX (React, Firebase).

Education

Bachelor of Computer Application (BCA)

2020 - 2023

Nirmala College, Muvattupuzha

MERN Stack Development

2023 - 2024

Self-Learning Bootcamp, Ernakulam
